                                                           Single pass sequencing. Bases called and trimmed with phred v0.020425.c. Vector identified by cross match with the minscore 20 and minmatch 12 options. Vector:pBluesCriptI(SK+) R. Site 1:EcoRV(lost) R. Site 2:NotI Seq Primer: T7 Normalised library constructed from pooled monocytes from Bos taurus (Holstein) and Bos indicus (Sahiwals) cattle subjected to various stimuli, including infection with the protozoan parasite Theileria annulata.

UI-CF-EC1 is a normalized cDNA library containing the following tissue(8): Normal lung from adult and from fetal day 64, day 87, week 19 and week 42. The library was constructed according to Bonaldo. Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT773-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT) 18 tail. The sequence tag for this library is AAGTGCTTAC.

with Not I. and cloned directionally into pT73-P25 vector. The oligonucleotide used to prime the synthesis of first-strand contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tags for this library are: fetal eyes, AGATAGCGAT; eye anterior segment, AATGCGCAT; optic nerve, CCATAAGTG; retina, CCGCG; Retina Foveal and Macular, GTCC; RPE and Choroid, ACCTA. This library was created for the program, Gene Discovery in the Visual System, supported by National Eye Institute (NEI). TAG_LIB-UIL-E-EJJ TAG_SEQ-AGAATCAAGA"

/note="Organ: eye; Vector: pT773-Pac (Pharmacia) with a modified polylinker; Site_1: EcoR I; Site_2: Not I; Ul-E-EJ1 is a subtracted cDNA library constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I; and cloned directionally into pT773-Pac vector. The oligonucleotide used to prime the synthesis of
                                                                                                                                                                                                                                                                                                             University of lowa 1156 MEBRF, Iowa City, IA 52242, USA Tel: 319 315 8250

Fax: 319 315 8250

Clone Distribution: Researchers may obtain clones from Research Genetics (www.resgen.com).

The following repetitive elements were found in this cDNA sequence: 626-650, >AT rich#Low_complexity (matched compliment)

Seq primer: M13 REVENSE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tags for this library are: fetal eyes.
AGAATCAAGA; lens, CGATTAAGCA, eye anterior sequent,
AATGCCGCAT; optic nerve, CCATTAAGTG; retina, CCGCG; Retina Roveal and Macular, GTCC; RPE and Chorold, ACCTA. This library was created for the program, Gene Discovery in the Visual System, supported by National Bye Institute (NEI)."

Unpublished (1999)

Contact: Robert Strausberg, Ph.D.

Email: cgapba-remail.nih.gov

Tissue Procurement: Dr. James Lin University of Iowa
CDNA Library Preparation: Dr. M. Bento Soares, University of Iowa
CDNA Library Arrayed by: Dr. M. Bento Soares, University of Iowa
CNA Library Arrayed by: Dr. M. Bento Soares, University of Iowa
DNA Sequencing by: Dr. M. Bento Soares, University of Iowa
Clone Distribution: Distribution information can be found at
http://genome.uiowa.edu/distribution/mousefl.html
This clone was contributed by the Brain Molecular Anatomy Project
(BMAP)
The following repetitive elements were found in this CDNA
sequence: 708-733, -AT_rich#Low_complexity
                                                                                                                                                                                                                                                                                                                                                                                                 792 bp mRNA linear EST 29-APR-2004
